- Member name aliasing to suit different class of users
- Dimension slicer
- Custom set definition
- Named set support
- Unbounded cross drilling
- Drill Through support
- Support for large database and dimension analysis
- Drop-down menus to easily change member selections within dimensions
- Find function to locate specific members within large dimensions

As the leading third party OLAP Client for Microsoft® Analysis Services, the ProClarity® Desktop Professional version 5, provides analysts and decision makers with the functionality needed to analyze critical data. Delivering intuitive desktop access to powerful analytics and data visualization, ProClarity Desktop Professional significantly reduces the time required for decision-makers to understand and act on key metrics driving their business.

Intuitive Information Access & Analysis

With the ProClarity Desktop Professional users feel less like they are working with a complex analysis tool and more like they're connected directly to their business information. Its browser-inspired interface augmented with multiple wizards, reduces training time and gives users intuitive control over the data analysis process. ProClarity goes beyond standard business graphics to harness the real power of Microsoft Analysis Services – enabling business users to see their data and gain understanding.

Supporting Traditional Analysis

An intuitive, interactive grid and a suite of standard business charts allow typical analysis functions, but go the extra mile by supporting fast queries against even the largest databases.

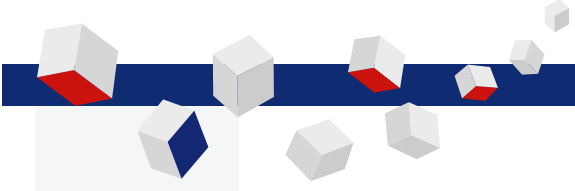

Delivering Beyond Analytic Expectations

Advanced visualization capabilities, such as Decomposition Tree and Perspective, provide greater understanding of complex business information, and solve the specific analytic problems decision-makers deal with daily.

Interactive Publishing & Collaboration

The ProClarity Desktop Professional provides the environment for driving live key performance indicators (KPIs) to decision-makers. Analysts and those responsible for creating and sharing analyses with others organize key findings via Briefing Books and have many methods of distribution at their fingertips. Whether studying metrics from a Digital Dashboard or viewing live analytics in a PowerPoint presentation, decision-makers can glean knowledge and create derivative analyses for their own use to share with others. The ProClarity Desktop Professional provides a publishing interface for use in organizations taking advantage of central management, security and distribution of analytics via the ProClarity Analytics Server. In these scenarios, the Authoring Tool (an optional product) empowers users to publish and manage Briefing Books in libraries on the Server.

For existing users of ProClarity Analytics Server, the Desktop Professional provides an interface which enables the publishing of Briefing Books, to the Server. Benefits of this functionality include; central management, security and easy distribution. The ProClarity Authoring Tool (an optional license) allows users to publish and manage Briefing Books in libraries on the ProClarity Analytics Server.

Recommended Hardware:

Pentium class processor 80 MB RAM
Pentium class processor 128 MB RAM

Supported Operating Systems:

Windows 98SE, NT 4 (SP 6), 2000, ME, XP Professional

SQL Server and Other Software:

SQL Server 2000 Analysis Services

Flexible for Unique Users & Analysis

The ProClarity® 5 Professional is designed to enable users to meet their industry or role-specific analysis requirements.

Integration with Standard Productivity Tools

By integrating advanced analytic capabilities into the Microsoft® Office environment, ProClarity allows users to continue to work within their frequently used desktop productivity tools. ProClarity Desktop Professional can be used to quickly and easily build interactive analytics into PowerPoint® 2000 presentations, Microsoft Outlook® 2000, Digital Dashboards and web sites.

Customization for Specific Analysis Requirements

ProClarity's Integration with Microsoft Visual Basic™ for Applications (VBA) enables customizations such as:

- Defining specific attributes for data points based upon a dimensional value - define that all chart data specific to a certain company be shown in blue.
- Creating customized analysis wizards - allow a sales rep. to walk through a wizard to better understand territory specific key performance indicators.
- Using VB to quickly integrate favorite ActiveX components.
